

# Release Notes

## 3.1.2

26. Apr. 25

Purely a maintenance update to keep the NetStone Common module up to date.

## 3.1.1

25. Apr 25

The old NetStone API Client threw `NotFoundExceptions` if the response status code was a 404. The new SDK instead threw an `ApiException`, which was a breaking change and required a dependency on/an import of Refit. It now throws `NotFoundExceptions` again, and a generic `NetStoneException` on other unsuccessful response status codes.

### Fixed

- Exceptions would require dependency on/import of Refit
  - Errors now throw `NetStoneException`
- 404 responses would throw Refit `ApiException` instead of NetStone Common `NotFoundException`
  - 404 responses now throw `NotFoundException`, just like NetStone API Client used to

## 3.1.0

20. Apr 25

### Initial Release

- Built for dependency injection
- Default .NET resilience handler with extended timeouts built-in
- Support for all Character and Free Company endpoints
- Basic usage guide at <https://github.com/Tawmy/NetStone.Api.Sdk>
- Replaces previous NetStone.Api.Client
